Editorial Review

From the Publisher

Presents an interdisciplinary discussion of global environmental change for the non-specialist in science. Provides a balanced, unified examination of the dynamic between natural change and human-induced change in the global environment. Explored first are the natural planetary systems at work (the natural exogenic systems of Earth), providing insightful coverage emphasizing the historical (geological) perspective on change as it discusses processes and change in the lithosphere, atmosphere, hydrosphere, and the biosphere systems. A detailed discussion of how human activities are influence these natural systems and the consequences that may result for ecosystems, humans and human infrastructures are provided. Areas of concern and interest include: deforestation, population and resource consumption, stratospheric ozone depletion, water usage and quality, global climatic change. The text concludes with a thought-provoking, prescriptive epilogue on the need for a new environmentally sustaining societal perspective. The first synthesis of the subject on a general level help it stand out as the new authoritative standard for engaging and accessible coverage.

Users Review

From reader reviews:

Kimberly Thibault:

Do you certainly one of people who can't read enjoyable if the sentence chained in the straightway, hold on guys this aren't like that. This Our Changing Planet: An Introduction to Earth System Science and Global Environmental Change book is readable by means of you who hate those perfect word style.
