Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) By Jean-Pierre Didier, Emmanuel Bigand

“Re-education” consists in training people injured either by illness or the vagaries of life to achieve the best functionality now possible for them. Strangely, the subject is not taught in the normal educational curricula of the relevant professions. It thus tends to be developed anew with each patient, without recourse to knowledge of what such training, or assistance in such training, might be.

New paradigms of re-education are in fact possible today, thanks to advances in cognitive science, and new technologies such as virtual reality and robotics. They lead to the re-thinking of the procedures of physical medicine, as well as of re-education.

The first part looks anew at re-education in the context of both international classifications of functionality, handicap and health, and the concept of normality. The second part highlights the function of implicit memory in re-education. And the last part shows the integration of new cognition technologies in the new paradigms of re-education.

Editorial Review

From the Back Cover

“Reeducation” consists in training people injured either by illness or the vagaries of life to achieve the best functionality now possible for them. Strangely, the subject is not taught in the normal educational curricula of the relevant professions. Reeducation thus tends to be developed anew with each patient, without recourse to knowledge of what such training, or assistance in such training, might be. However, new paradigms of reeducation are in fact possible today, thanks to advances in cognitive science and the development of new technologies such as virtual reality and robotics. In turn, they lead to the rethinking of the procedures of physical medicine, as well as of reeducation.

The present book addresses primarily those professionals involved in reeducation: the clinician, kinestherapist, ergotherapist, speech therapist, psychometrician, clinical psychologist, and neuropsychologist. More generally, it addresses also those in occupations in physical rehabilitation and in both primary and ongoing education.

The first part looks anew at reeducation in the context of both international classifications of functionality, handicap, and health and the concept of normality. The second part highlights the function of implicit memory in reeducation. And the last part, illustrated by practical examples, shows the integration of new cognition technologies in the new paradigms of reeducation.

By its combination of theoretical approach and practical application, the work offers new therapeutic routes toward a better and more integrated functionality for the patient.

Users Review

From reader reviews:

Robert Tyson:

Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) can be one of your beginning books that are good idea. We recommend that straight away because this book has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. This great information can easily drawn you into new stage of crucial thinking.

Scott Seward:

In this age globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The health of the world makes the information better to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You will see that now, a lot of publisher that will print many kinds of book. Often the book that recommended to you is Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) this publication consist a lot of the information in the condition of this world now. That book was represented how do the world has grown up. The dialect styles that writer use to explain it is easy to understand. Typically the writer made some investigation when he makes this book. That's why this book appropriate all of you.

Larry Valadez:

As a pupil exactly feel bored in order to reading. If their teacher inquired them to go to the library in order to make summary for some e-book, they are complained. Just tiny students that has reading's soul or real their interest. They just do what the trainer want, like asked to go to the library. They go to presently there but nothing reading very seriously. Any students feel that reading is not important, boring in addition to can't see colorful pictures on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) can make you experience more interested to read.

Ann Craft:

A number of people said that they feel bored when they reading a book. They are directly felt this when they get a half portions of the book. You can choose the book Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) to make your reading is interesting. Your skill of reading skill is developing when you including reading. Try to choose very simple book to make you enjoy to learn it and mingle the opinion about book and examining especially. It is to be 1st opinion for you to like to available a book and study it. Beside that the reserve Rethinking physical and rehabilitation medicine: New technologies induce new learning strategies (Collection de L'Académie Européenne de Médecine de Réadaptation) can to be a newly purchased friend when you're experience alone and confuse in doing what must you're doing of that time.
