Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design) By Dimitrios Serpanos, Tilman Wolf

Architecture of Network Systems explains the practice and methodologies that will allow you to solve a broad range of problems in system design, including problems related to security, quality of service, performance, manageability, and more. Leading researchers Dimitrios Serpanos and Tilman Wolf develop architectures for all network sub-systems, bridging the gap between operation and VLSI.

This book provides comprehensive coverage of the technical aspects of network systems, including system-on-chip technologies, embedded protocol processing and high-performance, and low-power design. It develops a functional approach to network system architecture based on the OSI reference model, which is useful for practitioners at every level. It also covers both fundamentals and the latest developments in network systems architecture, including network-on-chip, network processors, algorithms for lookup and classification, and network systems for the next-generation Internet.

The book is recommended for practicing engineers designing the architecture of network systems and graduate students in computer engineering and computer science studying network system design.

- This is the first book to provide comprehensive coverage of the technical aspects of network systems, including processing systems, hardware technologies, memory managers, software routers, and more.
- Develops a systematic approach to network architectures, based on the OSI reference model, that is useful for practitioners at every level.
- Covers both the important basics and cutting-edge topics in network systems architecture, including Quality of Service and Security for mobile, real-time P2P services, Low-Power Requirements for Mobile Systems, and next generation Internet systems.

Editorial Review

Review

"Designed for upper level undergraduate or graduate students in network engineering and architecture, this volume presents a comprehensive examination of major features of contemporary network systems and embedded network architectures. Topics discussed include network protocols, interconnects and switching, network adapters, bridges and routers, transport and application layer systems, QoS and security, network on chip architectures and next generation Internet architecture. Chapters include numerous illustrations and tables as well as concise summaries. Serpanos is a professor of electrical and computer engineering at the University of Petras, Greece and Wolf is a professor of computer engineering at the University of Massachusetts, Amherst."--*Book News, Reference & Research*

From the Back Cover

A structured approach to the technical aspects of network systems

Architecture of Network Systems Dimitrios Serpanos and Tilman Wolf

This is the most comprehensive book on network systems, covering design and evaluation techniques from the link layer to application layer. It beautifully blends networking with architecture and operating systems with just the right amount of detail. The book will serve as an outstanding text and reference for graduate students and researchers in the emerging area of architecture of networking systems.

- Laxmi Narayan Bhuyan, Distinguished Professor and Chair, Department of Computer Science and Engineering, University of California, Riverside

Architecture of Network Systems is a very well-written book that covers fundamental concepts, principles, and protocols in networking/switching, as well as their real implementation solutions. I'd highly recommend it to people studying or working in computer networking.

-H. Jonathan Chao, Head of Department and Professor, Department of Electrical & Computer Engineering, Polytechnic Institute of NYU

Network systems combine design principles and technologies from computer architecture, embedded systems, algorithms, and networking. *Architecture of Network Systems* explains the practice and methodologies that are necessary to solve a broad range of problems in network system design, including issues related to performance, scalability, security, and power efficiency. Leading researchers Dimitrios Serpanos and Tilman Wolf discuss network systems and their components at all layers of the protocol stack, bridging the gap between design and operation. This systematic treatment ranges from basic to advanced topics, exposing major challenges in network systems architecture and divulging their solutions.

Features

- Provides comprehensive coverage of the technical aspects of network systems, including system-on-chip technologies, embedded protocol processing and high-performance and low-power design.

- Develops a functional approach to network system architecture based on the OSI reference model, which is useful for practitioners at every level.
- Covers both fundamentals and the latest developments in network systems architecture, including network-on-chip, network processors, algorithms for lookup and classification, and network systems for the next-generation Internet.

Dimitrios Serpanos, Professor in the Department of Electrical and Computer Engineering, University of Patras, Greece and Director of the Industrial Systems Institute/R.C. Athena, Patras, Greece.

Tilman Wolf, Associate Professor in the Department of Electrical and Computer Engineering, University of Massachusetts, Amherst.

About the Author

Dimitrios Serpanos is a Professor of Computer Architecture at the Department of Electrical and Computer of the University of Patras in Patras, Greece. He is also Director-elect of the Industrial Systems Institute (ISI) in Patras. Professor Serpanos holds a PhD in Computer Science from Princeton University (1990), an MA in Computer Science from Princeton (1988) and a Diploma in Computer Engineering and Informatics from the University of Patras (1985). Before joining the University of Patras, Professor Serpanos was a Professor (Assistant at first and Associate later) at the Department of Computer Science, University of Crete, Greece (1996-2000) and earlier, he was a Research Staff Member at IBM T.J. Watson Research Center, New York, USA. In addition to his faculty appointments, he has also been conducting research at research institutes, specifically ICS-FORTH, while in Crete, and ISI while in Patras.

Professor Serpanos has been a leader in the area of architecture of network systems, working on such systems for almost 20 years. He introduced the concept of specialized protocol processors (1992) and authored the first paper on multi-protocol, multiprocessor router architectures (1994). He has written more than 100 research papers in high quality conferences and research journals, addressing architectures and design issues of all types of network systems, from switches to routers and gateways. He has also worked on Quality-of-Service issues and has extensive activity in network and computer security. In addition to his research papers, Professor Serpanos holds 2 US patents and 7 invention disclosures in the area of network systems.

Professor Serpanos has received awards and distinctions as a graduate student, an IBM employee and as a faculty (2005 IBM Faculty Award). Furthermore, he is the General Chair of 2 IEEE Conferences, Technical Program Chair in 2 IEEE Conferences, organizer (twice) of an ACM Workshop, member of Technical Program Committees for conferences and workshops (over 25) and panel organizer for several conferences. He has served also in additional positions in conference organizing committees. In relevance to the subject of the book, Professor Serpanos is the leading Guest-Editor of a special issue of IEEE Network on Advances in Network Systems Architecture and the organizer and coordinator of a Task Force on Network Systems Architecture in the E-NEXT European Network of Excellence.

Professor Serpanos is a Senior Member of the IEEE; a member of ACM, IET, NYAS, and the Technical Chamber of Greece; he is also an educational member of USENIX.

Tilman Wolf is an associate professor in the Department of Electrical and Computer Engineering at the University of Massachusetts Amherst. He received a Diploma in informatics from the University of Stuttgart, Germany, in 1998. He also received a M.S. in computer science in 1998, a M.S. in computer engineering in 2000, and a D.Sc. in computer science in 2002, all from Washington University in St. Louis.

Dr. Wolf is engaged in research and teaching in the areas of computer networks, computer architecture, and embedded systems. His research interests include network processors, their application in next-generation Internet architectures, and embedded system security. His research has attracted substantial funding from both industry and the federal government, including an NSF CAREER award. He has taught graduate and undergraduate courses on computer networks, digital design, microcontroller laboratories, and capstone design projects.

Dr. Wolf is a senior member of the IEEE and member of the ACM. He has been active as program committee member and organizing committee member of several professional conferences, including IEEE INFOCOM and ACM SIGCOMM. He is currently serving as treasurer for the ACM SIGCOMM society. In 2004, he received the College of Engineering Outstanding Junior Faculty Award at the University of Massachusetts.

Users Review

From reader reviews:

Patricia Vasquez:

Now a day people who Living in the era where everything reachable by match the internet and the resources within it can be true or not demand people to be aware of each details they get. How many people to be smart in getting any information nowadays? Of course the answer is reading a book. Reading a book can help folks out of this uncertainty Information especially this Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design) book as this book offers you rich facts and knowledge. Of course the information in this book hundred % guarantees there is no doubt in it you may already know.

Kathleen Strickland:

Playing with family in a park, coming to see the sea world or hanging out with pals is thing that usually you might have done when you have spare time, after that why you don't try thing that really opposite from that. One activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition info. Even you love Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design), it is possible to enjoy both. It is great combination right, you still would like to miss it? What kind of hang type is it? Oh occur its mind hangout guys. What? Still don't get it, oh come on its named reading friends.

Sheila Kilburn:

This Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design) is great reserve for you because the content that is full of information for you who also always deal with

world and have to make decision every minute. This book reveal it information accurately using great organize word or we can say no rambling sentences included. So if you are read it hurriedly you can have whole details in it. Doesn't mean it only provides you with straight forward sentences but challenging core information with wonderful delivering sentences. Having Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design) in your hand like getting the world in your arm, data in it is not ridiculous one particular. We can say that no book that offer you world inside ten or fifteen minute right but this e-book already do that. So , it is good reading book. Hi Mr. and Mrs. busy do you still doubt in which?

Christopher Wilkerson:

In this particular era which is the greater particular person or who has ability to do something more are more valuable than other. Do you want to become one of it? It is just simple approach to have that. What you must do is just spending your time almost no but quite enough to experience a look at some books. Among the books in the top collection in your reading list is actually Architecture of Network Systems (The Morgan Kaufmann Series in Computer Architecture and Design). This book that is qualified as The Hungry Inclines can get you closer in turning into precious person. By looking up and review this book you can get many advantages.
