Springer Handbook of Marine Biotechnology (Springer Handbooks) From Springer

This Springer Handbook provides, for the first time, a complete and consistent overview over the methods, applications, and products in the field of marine biotechnology. A large portion of the surface of the earth (ca. 70%) is covered by the oceans. More than 80% of the living organisms on the earth are found in aquatic ecosystems. The aquatic systems thus constitute a rich reservoir for various chemical materials and (bio-)chemical processes.

Edited by a renowned expert with a longstanding experience, and including over 60 contributions from leading international scientists, the Springer Handbook of Marine Biotechnology is a major authoritative desk reference for everyone interested or working in the field of marine biotechnology and bioprocessing - from undergraduate and graduate students, over scientists and teachers, to professionals.

Marine biotechnology is concerned with the study of biochemical materials and processes from marine sources, that play a vital role in the isolation of novel drugs, and to bring them to industrial and pharmaceutical development. Today, a multitude of bioprocess techniques is employed to isolate and produce marine natural compounds, novel biomaterials, or proteins and enzymes from marine organisms, and to bring them to applications as pharmaceuticals, cosmeceuticals or nutraceuticals, or for the production of bioenergy from marine sources. All these topics are addressed by the Springer Handbook of Marine Biotechnology.

The book is divided into ten parts. Each part is consistently organized, so that the handbook provides a sound introduction to marine biotechnology - from historical backgrounds and the fundamentals, over the description of the methods and technology, to their applications - but it can also be used as a reference work.

Key topics include:

- Marine flora and fauna
- Tools and methods in marine biotechnology
- Marine genomics
- Marine microbiology

- Bioenergy and biofuels
- Marine bioproducts in industrial applications
- Marine bioproducts in medical and pharmaceutical applications
- and many more...

Editorial Review

Review

“Marine Biotech’s key aims is ‘to be useful as readable desk reference book to give a fast and comprehensive overview and easy retrieval of essential reliable key information, including tables, graphs, and bibliographies.’ ... It is therefore important to have books such as Marine Biotech to present the drawing together of information about specific research to give the non-specialist that necessary topical overview and updating.” (Nigel Chaffey, Annals of Botany, aobblog.com, April, 2016)

From the Back Cover

The Springer Handbook of Marine Biotechnology provides, for the first time, a complete and consistent overview of the methods, applications, and products of marine biotechnology. Since a large portion of the surface of the earth is covered by the oceans and more than 80% of living organisms are found in aquatic ecosystems, they constitute a rich reservoir for various chemical materials and (bio-)chemical processes. Marine biotechnology studies these biochemical materials and processes from marine sources and makes them available to applications as pharmaceuticals, cosmeceuticals or nutraceuticals as well as for the production of bioenergy and biofuels. Edited by Prof. Dr. Se-Kwon Kim, a renowned expert with a longstanding experience, and including over 60 chapters from leading international scientists, this handbook is a major authoritative desk reference for everyone interested or working in the field of marine biotechnology and bioprocessing.

The handbook is divided into 10 parts. Part A: Marine Flora and Fauna. Part B: Tools and Methods in Marine Biotechnology. Part C: Marine Genomics. Part D: Marine Algal Biotechnology. Part E: Marine Microbiology and Biotechnology. Part F: Marine-Derived Metabolites. Part G: Application of Marine Biotechnology. Part H: Bioenergy and Biofuels. Part I: Biomedical Applications. Part J: Industrial Applications.

Key topics include:

- Marine flora and fauna
- Tools and methods in marine biotechnology
- Marine genomics
- Marine microbiology
- Bioenergy and biofuels
- Marine bioproducts for industrial applications
- Marine bioproducts for medical and pharmaceutical applications
- and many more...

About the Author

Prof. Dr. Se-Kwon Kim has more than 40 years of experience as a marine biochemist, working in the field of marine bioprocess and biotechnology. He holds a professorship of marine biochemistry at the Pukyong National University, Pusan, South Korea and is the director of the Marine Bioprocess Research Center in Pusan, Korea. Prof. Kim obtained his PhD from the Pukyong National University, before joining the University of Illinois, Urbana-Champaign (USA) for postdoctoral research. In 1999-2000, he has been

visiting professor at the Memorial University of Newfoundland, Canada. To date, his research has been documented in more than 450 original research papers, 76 patents and several books.

Prof. Kim's major research interests are bioactive substances derived from marine organisms and their various applications (e.g. as pharmaceuticals, cosmeceuticals, nutraceuticals or for dietary supplements).

Users Review

From reader reviews:

Eldon Hall:

The book Springer Handbook of Marine Biotechnology (Springer Handbooks) can give more knowledge and also the precise product information about everything you want. So why must we leave the good thing like a book Springer Handbook of Marine Biotechnology (Springer Handbooks)? Several of you have a different opinion about publication. But one aim this book can give many details for us. It is absolutely proper. Right now, try to closer with your book. Knowledge or info that you take for that, you may give for each other; you may share all of these. Book Springer Handbook of Marine Biotechnology (Springer Handbooks) has simple shape nevertheless, you know: it has great and large function for you. You can appearance the enormous world by available and read a e-book. So it is very wonderful.

Chris Wolf:

Here thing why that Springer Handbook of Marine Biotechnology (Springer Handbooks) are different and trusted to be yours. First of all studying a book is good nevertheless it depends in the content of the usb ports which is the content is as delightful as food or not. Springer Handbook of Marine Biotechnology (Springer Handbooks) giving you information deeper as different ways, you can find any reserve out there but there is no guide that similar with Springer Handbook of Marine Biotechnology (Springer Handbooks). It gives you thrill reading through journey, its open up your eyes about the thing in which happened in the world which is maybe can be happened around you. You can actually bring everywhere like in park, café, or even in your method home by train. When you are having difficulties in bringing the printed book maybe the form of Springer Handbook of Marine Biotechnology (Springer Handbooks) in e-book can be your choice.

Vickie Kay:

Spent a free time to be fun activity to do! A lot of people spent their spare time with their family, or their friends. Usually they undertaking activity like watching television, planning to beach, or picnic within the park. They actually doing same every week. Do you feel it? Will you something different to fill your own free time/ holiday? Can be reading a book could be option to fill your no cost time/ holiday. The first thing you will ask may be what kinds of guide that you should read. If you want to consider look for book, may be the e-book untitled Springer Handbook of Marine Biotechnology (Springer Handbooks) can be fine book to read. May be it can be best activity to you.

Christopher Small:

Don't be worry should you be afraid that this book will probably filled the space in your house, you might have it in e-book approach, more simple and reachable. This particular Springer Handbook of Marine Biotechnology (Springer Handbooks) can give you a lot of buddies because by you looking at this one book you have point that they don't and make you more like an interesting person. This specific book can be one of one step for you to get success. This guide offer you information that maybe your friend doesn't recognize, by knowing more than various other make you to be great persons. So , why hesitate? We should have Springer Handbook of Marine Biotechnology (Springer Handbooks).
