## Algebraic Number Theory (Springer Undergraduate Mathematics Series)

By Frazer Jarvis

This undergraduate textbook provides an approachable and thorough introduction to the topic of algebraic number theory, taking the reader from unique factorisation in the integers through to the modern-day number field sieve. The first few chapters consider the importance of arithmetic in fields larger than the rational numbers. Whilst some results generalise well, the unique factorisation of the integers in these more general number fields often fail. Algebraic number theory aims to overcome this problem. Most examples are taken from quadratic fields, for which calculations are easy to perform.

The middle section considers more general theory and results for number fields, and the book concludes with some topics which are more likely to be suitable for advanced students, namely, the analytic class number formula and the number field sieve. This is the first time that the number field sieve has been considered in a textbook at this level.

### Editorial Review

#### Review

“Undergraduate mathematics students need both to develop facility with numerical and symbolic calculation and comfort with abstraction. Algebraic number theory offers an ideal context for encountering the synthesis of these goals. One could compile a shelf of graduate-level expositions of algebraic number theory, and another shelf of undergraduate general number theory texts that culminate with a first exposure to it. ... Summing Up: Highly recommended. Upper-division undergraduates.” (D. V. Feldman, *Choice*, Vol. 52 (8), April, 2015)

“In this book, the author leads the readers from the theorem of unique factorization in elementary number theory to central results in algebraic number theory. ... This book is designed for being used in undergraduate courses in algebraic number theory; the clarity of the exposition and the wealth of examples and exercises (with hints and solutions) also make it suitable for self-study and reading courses.” (Franz Lemmermeyer, *zbMATH*, Vol. 1303, 2015)

#### From the Back Cover

The technical difficulties of algebraic number theory often make this subject appear difficult to beginners. This undergraduate textbook provides a welcome solution to these problems as it provides an approachable and thorough introduction to the topic.

*Algebraic Number Theory* takes the reader from unique factorisation in the integers through to the modern-day number field sieve. The first few chapters consider the importance of arithmetic in fields larger than the rational numbers. Whilst some results generalise well, the unique factorisation of the integers in these more general number fields often fail. Algebraic number theory aims to overcome this problem. Most examples are taken from quadratic fields, for which calculations are easy to perform.

The middle section considers more general theory and results for number fields, and the book concludes with some topics which are more likely to be suitable for advanced students, namely, the analytic class number formula and the number field sieve. This is the first time that the number field sieve has been considered in a textbook at this level.

#### About the Author

Frazer Jarvis obtained his PhD from the University of Cambridge under the supervision of Richard Taylor in 1995. After postdoctoral periods in Strasbourg, Durham and Oxford, he has been a lecturer at Sheffield since 1998. His research has focused on modular forms and Galois representations over totally real fields, and he is currently interested in  $\mathrm{GSp}(4)$ .

### Users Review

#### From reader reviews:

**Billie Duran:**

Inside other case, little people like to read book Algebraic Number Theory (Springer Undergraduate Mathematics Series). You can choose the best book if you love reading a book. Provided that we know about how is important some sort of book Algebraic Number Theory (Springer Undergraduate Mathematics Series). You can add understanding and of course you can around the world by the book. Absolutely right, mainly because from book you can realize everything! From your country until foreign or abroad you can be known. About simple factor until wonderful thing you can know that. In this era, you can open a book as well as searching by internet device. It is called e-book. You should use it when you feel uninterested to go to the library. Let's study.

**Michael Albin:**

Hey guys, do you desires to finds a new book to read? May be the book with the headline Algebraic Number Theory (Springer Undergraduate Mathematics Series) suitable to you? The particular book was written by popular writer in this era. The actual book untitled Algebraic Number Theory (Springer Undergraduate Mathematics Series) is the one of several books that will everyone read now. This book was inspired a number of people in the world. When you read this e-book you will enter the new dimensions that you ever know just before. The author explained their concept in the simple way, therefore all of people can easily to recognise the core of this e-book. This book will give you a large amount of information about this world now. So you can see the represented of the world in this book.

**John Barstow:**

In this era which is the greater person or who has ability to do something more are more treasured than other. Do you want to become one among it? It is just simple approach to have that. What you need to do is just spending your time little but quite enough to get a look at some books. One of many books in the top record in your reading list is definitely Algebraic Number Theory (Springer Undergraduate Mathematics Series). This book that is certainly qualified as The Hungry Mountains can get you closer in turning into precious person. By looking upwards and review this e-book you can get many advantages.

**Valerie Smith:**

You can find this Algebraic Number Theory (Springer Undergraduate Mathematics Series) by go to the bookstore or Mall. Merely viewing or reviewing it could possibly to be your solve trouble if you get difficulties to your knowledge. Kinds of this publication are various. Not only simply by written or printed but also can you enjoy this book by simply e-book. In the modern era like now, you just looking from your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose proper ways for you.
