Supercritical Fluid Technology for Energy and Environmental Applications

From Elsevier

Supercritical Fluid Technology for Energy and Environmental Applications covers the fundamental principles involved in the preparation and characterization of supercritical fluids (SCFs) used in the energy production and other environmental applications. Energy production from diversified resources ? including renewable materials ? using clean processes can be accomplished using technologies like SCFs. This book is focused on critical issues scientists and engineers face in applying SCFs to energy production and environmental protection, the innovative solutions they have found, and the challenges they need to overcome. The book also covers the basics of sub- and supercritical fluids, like the thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations.

A supercritical fluid is any substance at a temperature and pressure above its critical point where distinct liquid and gas phases do not exist. At this state the compound demonstrates unique properties, which can be "fine-tuned," making them suitable as organic solvents in a range of industrial and laboratory processes.

This volume enables readers to select the most appropriate medium for a specific situation. It helps instructors prepare course material for graduate and postgraduate courses in the area of chemistry, chemical engineering, and environmental engineering. And it helps professional engineers learn supercritical fluid-based technologies and use them in solving the increasingly challenging environmental issues.

- Relates theory, chemical characteristics, and properties of the particular supercritical fluid to its various applications
- Covers the fundamentals of supercritical fluids, like thermodynamics of phase and chemical equilibria, mathematical modeling, and process calculations
- Includes the most recent applications of supercritical fluids, including energy generation, materials synthesis, and environmental protection

Editorial Review

Users Review

From reader reviews:

Rita Hackett:

As people who live in the modest era should be update about what going on or data even knowledge to make them keep up with the era which is always change and advance. Some of you maybe will probably update themselves by examining books. It is a good choice for yourself but the problems coming to an individual is you don't know what kind you should start with. This Supercritical Fluid Technology for Energy and Environmental Applications is our recommendation to make you keep up with the world. Why, because book serves what you want and wish in this era.

Edward Yung:

The book Supercritical Fluid Technology for Energy and Environmental Applications will bring that you the new experience of reading some sort of book. The author style to clarify the idea is very unique. Should you try to find new book to learn, this book very acceptable to you. The book Supercritical Fluid Technology for Energy and Environmental Applications is much recommended to you to learn. You can also get the e-book through the official web site, so you can more readily to read the book.

Joshua Poulson:

You will get this Supercritical Fluid Technology for Energy and Environmental Applications by look at the bookstore or Mall. Simply viewing or reviewing it might to be your solve issue if you get difficulties to your knowledge. Kinds of this guide are various. Not only through written or printed but in addition can you enjoy this book by means of e-book. In the modern era similar to now, you just looking because of your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your publication. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose proper ways for you.

Jerry Schooler:

Some people said that they feel uninterested when they reading a publication. They are directly felt this when they get a half portions of the book. You can choose often the book Supercritical Fluid Technology for Energy and Environmental Applications to make your own personal reading is interesting. Your current skill of reading skill is developing when you just like reading. Try to choose straightforward book to make you enjoy to read it and mingle the sensation about book and examining especially. It is to be very first opinion for you to like to open up a book and go through it. Beside that the e-book Supercritical Fluid Technology

for Energy and Environmental Applications can to be your brand-new friend when you're feel alone and confuse in doing what must you're doing of this time.
