Editorial Review

From the Publisher

The eighth edition continues to provide a firm foundation of mathematical principles, techniques, and applications most useful in business, economics, the life and social sciences. It begins with non-calculus topics such as equations, functions, matrix algebra, linear programming, mathematics of finance, and probability. It then progresses through both single-variable and multivariable calculus. An abundance and variety of applications appear throughout so that students continually see how the mathematics they learn can be used in the real world.
