Editorial Review

From the Author

Some time ago, I was asked whether my two previous books - Authentication Systems for Secure Networks and Internet and Intranet Security - could also be used to educate professional Webmasters in security matters. Unfortunately, I realized that while the books cover the technologies used to secure applications for the WWW, they are written in a language that is somehow inappropriate for professional Webmasters. Note that these folks are generally familiar with network operating system issues and communication protocols, but they are neither security experts nor cryptographic specialists. They may not even be interested in architectural details and design considerations for cryptographic technologies and protocols that are not widely deployed.

Having in mind the professional Webmaster who must be educated in security matters within a relatively short period of time, I decided to write a book that serves as a corresponding security primer. While writing this book, I realized that it could also be used by common Web users and application developers. The resulting book, Security Technologies for the World Wide Web, overviews and briefly discusses the major topics that are relevant for Web security. The reader of this book will get a sufficiently complete overview of the major topics that are relevant for the WWW and the security thereof.

The book is intended for anyone who is concerned about security on the Web, is in charge of security for a network, or manages an organization that uses the WWW. It can be used for lectures, courses, and tutorials. It can also be used for self-study or serve as a handy reference for Web professionals.

About the Author

Rolf Oppliger is the founder and owner of eSECURITY Technologies Rolf Oppliger (www.esecurity.ch) and works for the Swiss Federal Strategy Unit for Information Technology (FSUIT) . He is also the author of Security Technologies for the World Wide Web (Artech House, 1999) , Internet and Intranet Security (Artech House, 1998), and Authentication Systems for Secure Networks (Artech House, 1996). Dr. Oppliger is the computer security series editor at Artech House. He received his M.Sc. and Ph.D. in Computer Science from the University of Berne, Switzerland, and the Venia Legendi in Computer Science from the University of Zurich, Switzerland).

Users Review

From reader reviews:

Belia Gillespie:

The book Security Technologies for the World Wide Web (Artech House Computer Security Series) make you feel enjoy for your spare time. You can utilize to make your capable a lot more increase. Book can to become your best friend when you getting tension or having big problem along with your subject. If you can make examining a book Security Technologies for the World Wide Web (Artech House Computer Security Series) to get your habit, you can get considerably more advantages, like add your own personal capable, increase your knowledge about some or all subjects. You may know everything if you like open and read a publication Security Technologies for the World Wide Web (Artech House Computer Security Series). Kinds of book are a lot of. It means that, science reserve or encyclopedia or others. So , how do you think about this reserve?

Denise Zimmerman:

This book untitled Security Technologies for the World Wide Web (Artech House Computer Security Series) to be one of several books that will best seller in this year, here is because when you read this guide you can get a lot of benefit upon it. You will easily to buy this kind of book in the book store or you can order it via online. The publisher of the book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Cell phone. So there is no reason for your requirements to past this e-book from your list.

Gene Baker:
