Hydrology and Floodplain Analysis (5th Edition) By Philip B. Bedient, Wayne C. Huber, Baxter E. Vieux

For undergraduate and graduate courses in Hydrology.

This text offers a clear and up-to-date presentation of fundamental concepts and design methods required to understand hydrology and floodplain analysis. It addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis, floodplain computation, flood control, urban hydrology, stormwater design, and computer modeling. This text is perfect for engineers and hydrologists.

Hydrology and Floodplain Analysis (5th Edition) By Philip B. Bedient, Wayne C. Huber, Baxter E. Vieux Bibliography

- Sales Rank: #606895 in Books
- Brand: Brand: Prentice Hall
- Published on: 2012-02-25
- Original language: English
- Number of items: 1
- Dimensions: 9.20" h x 1.20" w x 7.20" l, 2.90 pounds
- Binding: Hardcover
- 816 pages

Editorial Review

About the Author

Philip B. Bedient is the Herman Brown Professor of Engineering, with the Department of Civil and Environmental Engineering, Rice University, Houston, TX. He received the Ph.D. degree in environmental engineering sciences from the University of Florida. He is a registered professional engineer and teaches and performs research in surface hydrology, modeling, and flood prediction systems, and ground water hydrology. He has directed over 50 research projects over the past 31 years, and has written over 180 journal articles and conference proceedings over that time. He has also written four textbooks in the area of surface and groundwater hydrology. He received the Shell Distinguished Chair in environmental science (1988–92), the C.V. Theis award in 2007, and he was elected Fellow of ASCE in 2006. Dr. Bedient has worked on a variety of hydrologic problems, including river basin analyses, major floodplain studies, groundwater contamination models, and hydrologic/GIS models in water resources. He has been actively involved in developing computer systems for flood prediction and warning, and recently directed the development of a real-time flood alert system (FAS2) for the Texas Medical Center (TMC) in Houston. The FAS2 is based on converting NEXRAD radar data directly to rainfall in a GIS framework, which is then used to predict peak channel flows. Dr. Bedient is organizing the Houston test bed for the Center for Collaborative Adaptive Sensing of the Atmosphere (CASA), an NSF Engineering Research Center led by University of Massachusetts-Amherst, and Rice University is a strategic outreach partners. CASA's revolutionary sensing technology is expected to increase the warning time for flash floods and other severe weather events with greater accuracy than existing systems. The first high technology radar was deployed in 2007 in the TMC in Houston as part of the on-going flood warning system developed for the Texas Medical Center. Dr. Bedient has overseen the monitoring, modeling, and remediation at numerous hazardous waste sites, including six Superfund sites, and U.S. Air Force bases in five states. He has extensive experience in contaminant transport at sites impacted with chlorinated solvents and fuels. He has served on two National Academy of Science committees relating to environmental remediation and technology, and has received research funding from NSF, the U.S. EPA, the U.S. Department of Defense, the State of Texas, the U.S. Army Corps of Engineers, and the City of Houston.

Wayne C. Huber is Professor of Civil, Construction, and Environmental Engineering at Oregon State University, Corvallis. His doctoral work at the Massachusetts Institute of Technology dealt with thermal stratification in reservoirs, for which he received the Lorenz G. Straub Award from the University of Minnesota and the Hilgard Hydraulic Prize from the American Society of Civil Engineers (ASCE). He is a member of several technical societies and has served several administrative functions within the ASCE. He is the author of over 120 reports and technical papers, is a registered professional engineer, and has served as a consultant on numerous studies done by public agencies and private engineering firms. Beginning at the University of Florida and continuing at Oregon State University, Dr. Huber's research has included studies of urban hydrology, Storm water management, nonpoint source runoff, river basin hydrology, lake eutrophication, rainfall statistics, and hydrologic and water quality modeling. He is one of the original authors of the EPA Storm Water Management Model and has helped to maintain and improve the model continuously since 1971. Dr. Huber is an internationally recognized authority on runoff quantity and quality processes in urban areas.

Baxter E. Vieux is Director of the Natural Hazards and Disaster Research Center and Professor in the School of Civil Engineering and Environmental Science, University of Oklahoma, Norman where he teaches

courses in hydrology, GIS, surveying, measurements, water quality management, and engineering graphics and design. Before joining OU in 1990, he held a professorship at Michigan State University teaching watershed management after earning his PhD there. Dr. Vieux was recently appointed as Adjunct Professor with the Department of Environmental Engineering and Science, Rice University, Houston, Prior to his academic career, he spent ten years with the USDA Natural Resources Conservation Service serving as Acting State Engineer, and being responsible for statewide engineering design and construction programs in Michigan. He is a registered professional engineer in three states and is co-principal and founder of Vieux & Associates, Inc., an engineering technology company with clients in the US and internationally in radar rainfall, GIS, and hydrology. Dr. Vieux is the innovator and architect of the first commercially available physics-based distributed hydrologic model, *Vflo*TM, which uses real-time radar inputs for hydrologic analysis and prediction. Span urban and rural hydrology, the model has worldwide applicability. A patent is held for a method of realtime distributed model calibration. Consultative services include major corporations and engineering companies, and domestic and international water agencies. Externally sponsored academic research has been funded by NASA, EPA, NWS, NOAA, Army Corps of Engineers, NSF, and state/local agencies. Internationally, he has conducted research and worked on projects in France, Japan, Poland, Niger, Nicaragua, Taiwan, Paraguay, Korea and Romania. He has authored over 110 publications in hydrology including a recent book in its second edition, *Distributed Hydrologic Modeling Using GIS*, Kluwer Academic Press, Vol. 48.

Users Review

From reader reviews:

Kate Word:

Have you spare time for the day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity to get spend your time. Any person spent their very own spare time to take a stroll, shopping, or went to the Mall. How about open as well as read a book called Hydrology and Floodplain Analysis (5th Edition)? Maybe it is to be best activity for you. You recognize beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with it is opinion or you have some other opinion?

David Marx:

Book is written, printed, or descriptive for everything. You can know everything you want by a guide. Book has a different type. As we know that book is important matter to bring us around the world. Beside that you can your reading ability was fluently. A book Hydrology and Floodplain Analysis (5th Edition) will make you to become smarter. You can feel considerably more confidence if you can know about every thing. But some of you think that will open or reading some sort of book make you bored. It is not make you fun. Why they are often thought like that? Have you searching for best book or suitable book with you?

Larry Parrish:

The reason why? Because this Hydrology and Floodplain Analysis (5th Edition) is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will jolt you with the secret it inside. Reading this book close to it was fantastic author who all write the book in such wonderful way makes the content within easier to understand, entertaining method but still convey the meaning thoroughly. So , it is

good for you for not hesitating having this nowadays or you going to regret it. This unique book will give you a lot of benefits than the other book have got such as help improving your talent and your critical thinking technique. So , still want to hesitate having that book? If I were you I will go to the e-book store hurriedly.

Glenn Remaley:

You will get this Hydrology and Floodplain Analysis (5th Edition) by visit the bookstore or Mall. Simply viewing or reviewing it may to be your solve issue if you get difficulties for the knowledge. Kinds of this e-book are various. Not only by simply written or printed but additionally can you enjoy this book by simply e-book. In the modern era such as now, you just looking from your mobile phone and searching what their problem. Right now, choose your ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose right ways for you.
