Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition By Edward A. Keller, Duane E. DeVecchio

Natural Hazards uses real-life examples of hazards and disasters to explore how and why they happen and what we can do to limit their effects. The text's up-to-date coverage of recent disasters brings a fresh perspective to the material.

The Third **Edition** provides a new active learning approach, a fully updated visual program and revised pedagogy tools that highlight hallmark concepts of the text. Students have access to an updated *Hazard City*, an online media resource which gives instructors meaningful, easy-to-assign, and easy-to-grade assignments in which students investigate virtual disasters in the fictional town of Hazard City.

This program will provide an interactive and engaging learning experience for your students. Here's how:

Provide a balanced approach to the study of natural hazards: Focus on globalization of our economy, information access, and human effects on our planet in a broader, more balanced approach to the study of natural hazards.

Engage your students with "Hazard City": Students work through 11 different assignments by stepping into the role of a practicing geologist and analyzing potential disasters in the fictional town of Hazard City.

Enhance understanding and comprehension of natural hazards: Newly revised stories and case studies give students a behind the scenes glimpse into the lives of survivors, professionals and hazardous events.

Strong pedagogy tools reinforce the text's core features: The new chapter structure and design organizes the material into three major sections to help

students learn, digest, and review learning objectives.

Editorial Review

About the Author

Edward Keller is a professor, researcher, writer, and most importantly, mentor and teacher to undergraduate and graduate students. Currently, Dr. Keller's students are working on earthquake hazards, how waves of sediment move through a river system following disturbance, and geologic control on habitat to endangered southern steelhead trout. He was born and raised in California (Bachelor's degree in Geology and Mathematics from California State University at Fresno, Master's degree in Geology from University of California at Davis), it was while pursuing his Ph.D. in Geology from Purdue University in 1973 that Ed wrote the first edition of *Environmental Geology*, the text that became the foundation of the environmental geology curriculum. Ed joined the faculty of the University of California Santa Barbara in 1976 and has been there since, serving multiple times as the chair of both the Environmental Studies and Hydrologic Science programs. In that time he has been the author on over 100 articles, including seminal works on fluvial processes and tectonic geomorphology. Ed's academic honors include the Don J. Easterbrook Distinguished Scientist Award, Geological Society of America (2004), Quatercentenary Fellowship from Cambridge University, England (2000), two Outstanding Alumnus Awards from Purdue University (1994, 1996), A Distinguished Alumnus Award from California State University at Fresno (1998), the Outstanding Outreach Award from Southern California Earthquake Center (1999).

Ed and his wife Valery, who brings clarity to his writing, love walks on the beach at sunset and when the night herons guard moonlight sand at Arroyo Burro Beach in Santa Barbara.

Duane DeVecchio is currently a researcher and adjunct professor at the University of California, Santa Barbara, where he earned his PhD in geology. Since starting his graduate education, Duane has devoted a significant amount of time to becoming an effective communicator of science to today's students. He is a passionate teacher and feels strongly that students need to develop the ability to critically evaluate data presented in numerous forms from various sources. He believes this is particularly important in today's world where the internet offers accessibility to vast amounts of information, yet the validity of this information is often questionable or misleading. Fundamental to teaching this skill is integrating data from his current and past research to illustrate to students the methodology and rigor of scientific investigations.

Duane has a broad field-based background in the Earth sciences and likes to tell stories about his many months of living in trailers in the middle of nowhere mapping rocks. For his Masters Degree and post-Masters research he conducted structural and stratigraphic analysis, as well as numerical dating of volcanic and volcanoclastic rocks in southeast Idaho and the central Mojave Desert of California, which record the Miocene depositional and extensional histories of these regions. His PhD research was aimed at resolving fault slip rates and quantifying the earthquake hazard presented by several active fault-related folds growing beneath urbanized southern California. Duane's current research interests focus on the timing and rates of change of Earth's surface due to depositional and erosional processes that result from climate change and tectonics. When Duane is not teaching or conducting research, he enjoys whitewater rafting, rock climbing, snowboarding, and camping with his partner, Christy.

Users Review

From reader reviews:

David Sweet:

The reserve with title Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition possesses a lot of information that you can study it. You can get a lot of advantage after read this book. This kind of book exist new information the information that exist in this e-book represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. That book will bring you inside new era of the globalization. You can read the e-book on your own smart phone, so you can read that anywhere you want.

Melba More:

Do you have something that you like such as book? The guide lovers usually prefer to opt for book like comic, quick story and the biggest some may be novel. Now, why not trying Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition that give your entertainment preference will be satisfied by means of reading this book. Reading addiction all over the world can be said as the opportunity for people to know world far better then how they react in the direction of the world. It can't be said constantly that reading practice only for the geeky person but for all of you who wants to possibly be success person. So , for every you who want to start studying as your good habit, you could pick Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition become your own starter.

Rodney Natale:

Publication is one of source of expertise. We can add our understanding from it. Not only for students but native or citizen want book to know the up-date information of year for you to year. As we know those publications have many advantages. Beside most of us add our knowledge, could also bring us to around the world. With the book Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition we can acquire more advantage. Don't you to definitely be creative people? Being creative person must choose to read a book. Just simply choose the best book that acceptable with your aim. Don't end up being doubt to change your life by this book Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition. You can more inviting than now.

Jerry Brower:

Reading a guide make you to get more knowledge from this. You can take knowledge and information from your book. Book is composed or printed or highlighted from each source in which filled update of news. Within this modern era like right now, many ways to get information are available for a person. From media social like newspaper, magazines, science e-book, encyclopedia, reference book, book and comic. You can add your understanding by that book. Ready to spend your spare time to spread out your book? Or just in search of the Natural Hazards: Earth's Processes as Hazards, Disasters, and Catastrophes, Books a la Carte Edition when you essential it?
