**Visual Insights: A Practical Guide to Making Sense of Data (MIT Press)** By Katy Börner, David E. Polley

In the age of Big Data, the tools of information visualization offer us a microscope to help us make sense of the avalanche of data available on every subject. This book offers a gentle introduction to the design of insightful information visualizations. It is the only book on the subject that teaches nonprogrammers how to use open code and open data to design insightful visualizations. Readers will learn to apply advanced data mining and visualization techniques to make sense of temporal, geospatial, topical, and network data. The book, developed for use in an information visualization MOOC, covers data analysis algorithms that enable extraction of patterns and trends in data, with chapters devoted to "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (networks and trees); and to systems that drive research and development. Examples of projects undertaken for clients include an interactive visualization of the success of game player activity in *World of Warcraft*; a visualization of 311 number adoption that shows the diffusion of non-emergency calls in the United States; a return on investment study for two decades of HIV/AIDS research funding by NIAID; and a map showing the impact of the HiveNYC Learning Network. *Visual Insights* will be an essential resource on basic information visualization techniques for scholars in many fields, students, designers, or anyone who works with data.

**Visual Insights: A Practical Guide to Making Sense of Data (MIT Press)** By Katy Börner, David E. Polley

In the age of Big Data, the tools of information visualization offer us a macroscope to help us make sense of the avalanche of data available on every subject. This book offers a gentle introduction to the design of insightful information visualizations. It is the only book on the subject that teaches nonprogrammers how to use open code and open data to design insightful visualizations. Readers will learn to apply advanced data mining and visualization techniques to make sense of temporal, geospatial, topical, and network data. The book, developed for use in an information visualization MOOC, covers data analysis algorithms that enable extraction of patterns and trends in data, with chapters devoted to "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (networks and trees); and to systems that drive research and development. Examples of projects undertaken for clients include an interactive visualization of the success of game player activity in *World of Warcraft*; a visualization of 311 number adoption that shows the diffusion of non-emergency calls in the United States; a return on investment study for two decades of HIV/AIDS research funding by NIAID; and a map showing the impact of the HiveNYC Learning Network. *Visual Insights* will be an essential resource on basic information visualization techniques for scholars in many fields, students, designers, or anyone who works with data.

**Visual Insights: A Practical Guide to Making Sense of Data (MIT Press)** By Katy Börner, David E. Polley **Bibliography**

- Sales Rank: #432314 in Books
- Brand: MIT Press MA
- Published on: 2014-01-24
- Original language: English
- Number of items: 1
- Dimensions: 9.00" h x .63" w x 7.50" l, 1.59 pounds
- Binding: Paperback
- 312 pages

## **Editorial Review**

### Review

In the world of visualization and information graphics, the bibliography about thematic maps and statistical graphs is becoming abundant, little by little. However, studies of how to design network diagrams and conceptual maps are rare, and usually available only through scientific publications. Katy Börner and David Polley's book is the first serious attempt at offering a theoretical and practical introduction to this discipline, aimed not just at specialists, but at any reader, regardless of her or his background. I foresee that it'll become the textbook of choice for many instructors.

(Alberto Cairo, Professor of the Professional Practice at the School of Communication of the University of Miami and author of *The Functional Art: an Introduction to Information Graphics and Visualization*)

A good visualization is never done easy-peasy; good visualization is a science, a craft, and an art at once. If you want to become a visual data explorer and learn to produce meaningful visualizations, this book is a good guide for such a journey. It is a must-read for students at iSchools and those in the Digital Humanities, and a recommendation for inhabitants of the various interdisciplinary valleys in the science landscape.

(Andrea Scharnhorst, Head of Research at Data Archiving and Networked Services and member of the e-humanities group at the Royal Netherlands Academy of Arts and Sciences in Amsterdam, Netherlands)

In this age of knowledge abundance, policymakers and the public need to quickly understand complex information, and this book takes a giant leap forward in this arena. The knowledge system has become a global enterprise, and it is one that involves collaboration and interdisciplinary linkages. These trans-boundary links require new metrics and the use of new methods of examination and explanation. Katy Börner and David Polley's book creates a map into the new knowledge terrain that we will all be transiting soon.

(Caroline S. Wagner, Milton and Roslyn Wolf Chair in International Affairs; Director, Battelle Center for Science & Technology Policy, John Glenn School of Public Affairs, Ohio State University)

Following in the footsteps of the richly illustrated and highly informative book *The Atlas of Science: Visualizing What We Know*, Professor Katy Börner and David Polley's new book *Visual Insights: A Practical Guide to Making Sense of Data* brings theory and practice in seven manageable chapters to both new initiate and engaged user, giving an insightful overview of the field, and making accessible the methods and techniques to empower the reader to become a visualization practitioner.

(George Legrady, Director of the Experimental Visualization Lab and Chair of the Media Arts & Technology doctoral program at the University of California, Santa Barbara)

### About the Author

Katy Börner is Victor H. Yngve Professor of Information Science at Indiana University and the author of

*Atlas of Science: Visualizing What We Know* (MIT Press). David E. Polley is on the research staff at the Cyberinfrastructure for Network Science Center at Indiana University.

## **Users Review**

### **From reader reviews:**

#### **Tony Hill:**

Visual Insights: A Practical Guide to Making Sense of Data (MIT Press) can be one of your basic books that are good idea. We all recommend that straight away because this book has good vocabulary that can increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. The copy writer giving his/her effort that will put every word into satisfaction arrangement in writing Visual Insights: A Practical Guide to Making Sense of Data (MIT Press) nevertheless doesn't forget the main stage, giving the reader the hottest and also based confirm resource facts that maybe you can be among it. This great information may drawn you into completely new stage of crucial imagining.

#### **Adriana Phillips:**

You may spend your free time to read this book this book. This Visual Insights: A Practical Guide to Making Sense of Data (MIT Press) is simple to develop you can read it in the park your car, in the beach, train along with soon. If you did not get much space to bring the particular printed book, you can buy typically the e-book. It is make you better to read it. You can save the particular book in your smart phone. So there are a lot of benefits that you will get when you buy this book.

#### **Rhonda Rudder:**

You can get this Visual Insights: A Practical Guide to Making Sense of Data (MIT Press) by check out the bookstore or Mall. Just viewing or reviewing it can to be your solve issue if you get difficulties to your knowledge. Kinds of this e-book are various. Not only through written or printed but additionally can you enjoy this book through e-book. In the modern era like now, you just looking of your mobile phone and searching what their problem. Right now, choose your ways to get more information about your reserve. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose suitable ways for you.

#### **Charles Moreno:**

Book is one of source of understanding. We can add our expertise from it. Not only for students and also native or citizen need book to know the up-date information of year in order to year. As we know those publications have many advantages. Beside we all add our knowledge, also can bring us to around the world. By the book Visual Insights: A Practical Guide to Making Sense of Data (MIT Press) we can consider more advantage. Don't you to be creative people? To be creative person must love to read a book. Simply choose the best book that acceptable with your aim. Don't possibly be doubt to change your life at this time book Visual Insights: A Practical Guide to Making Sense of Data (MIT Press). You can more desirable than now.
